Getting WIN 8/10 Tablet to work on Skydemon using internal GPS

Having spent months trying to make this work on my Toshiba Encore, finally managed it…
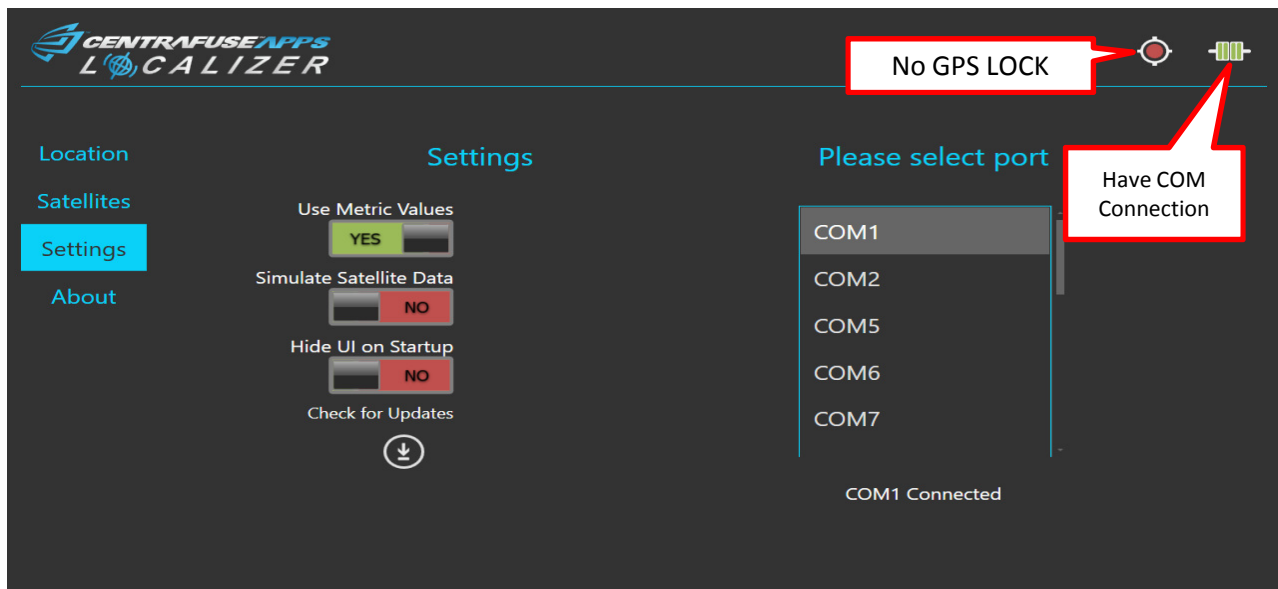

Need to download a com port emulator that will convert the built in tablet GPS signal into one that comes from a COM port, so that Skydemon can see the feed.

http://www.centrafuse.com/us/localizer-5-gui-1-port-service
$15

Once you have loaded the software. You will need to run Localizer in admin mode

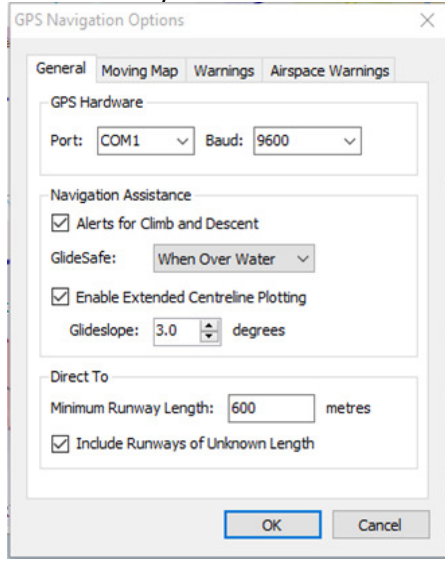

If Localizer is working then no need to worry

Otherwise look on their forum for the step by step guidance
http://forums.centrafuse.com/showthread.php?13869-Localizer-Installation-How-To
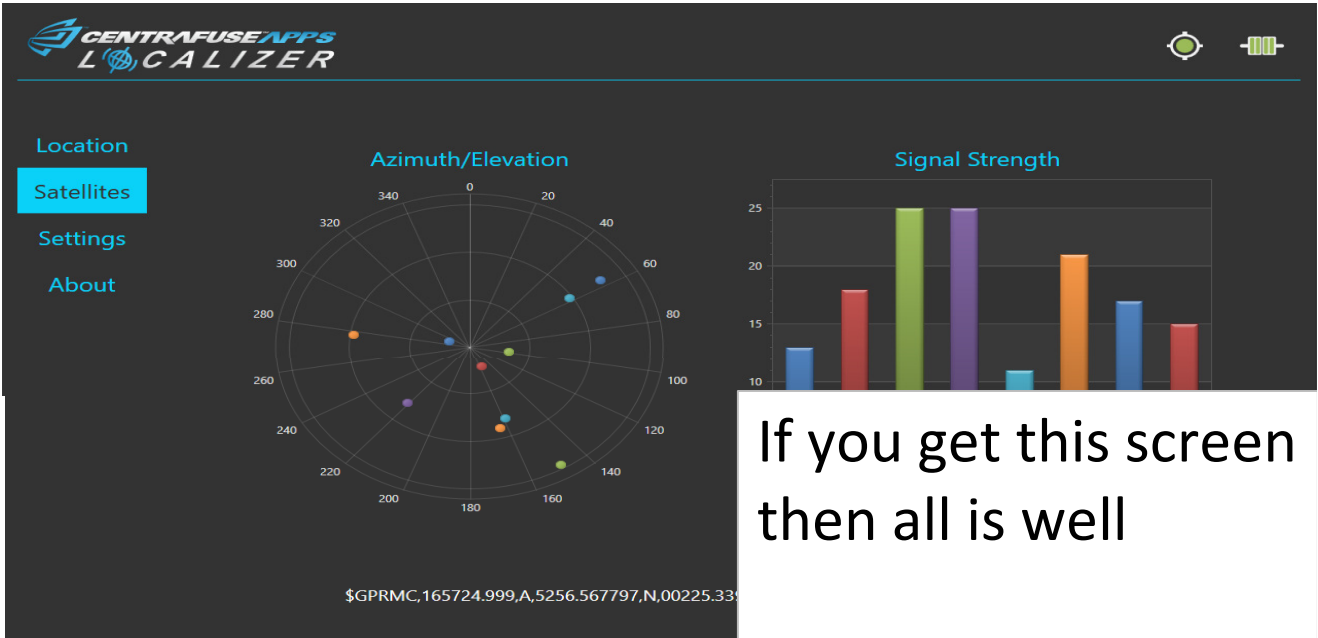

If you get this screen then all is well

On SD GPS Navigation Options, you will see the Com port. COM1 In my case

There you go! Works on a £120 WIN 10 tablet
